

PANDAS Exercise

This is an exercise to test your basic understanding of the Pandas Library so far.

We will be working on a use case from AnalyticsVidhya Hackathon to further apply our knowledge to a different dataset.

Link to the hackathon:

<https://datahack.analyticsvidhya.com/contest/practice-problem-big-mart-sales-iii/#ProblemStatement>

The above problem statement is similar to the regression problem statement discussed in our session in terms of prediction.

It is a completely different use case but will apply almost the same methods as discussed.

Apply all the pandas operations (in any preferred order) discussed in the session today and follow with a one-liner explanation of your understanding from the output.

The explanation does not have to be elaborate but just your basic understanding in layman terms.
